DESCRIPTORS	Age Differences; Attendance; *Census Figures; Dropouts; *Economic Factors; Educational Attainment; *Elementary Secondary Education; Employment Patterns; *Higher Education; Mothers; Preschool Education; Racial Differences; Sex Differences; *Social Influences; *Student Characteristics; Tables (Data); Urban Youth
IDENTIFIERS	Current Population Survey

ABSTRACT

This document contains the detailed tables that complement a one-page report with statistics on U.S. residents enrolled in school by a variety of characteristics. The set of detailed tabulations consists of 19 tables from the 1996 October Current Population Survey and 7 historical tables. Data in the tables are estimated based on a sample survey (the Current Population Survey) and are subject to sampling variability since they are not based on a complete enumeration of the population. These tables include information on age, enrollment level, sex, race, Hispanic origin, type of school, attendance status, employment status, family type, income, region, metropolitan status, mother's labor force status and educational level, marital status, and years of school completed. Some historical data, on topics such as dropout rates and the age distribution of college students, are also provided. These tables indicate that more than one-fourth of the population, 70.3 million people, were enrolled in regular school. Elementary school enrollment stood at 31.5 million children, and high school enrollment totaled 15.3 million students. The annual high school dropout rate (from grades 10 to 12) was 4.7%. The dropout pool of people not enrolled and not a high school graduate of young adults aged 18 to 24 years old totaled 3.1 million, or 12.8% of this age group. (SLD)

DETAILED TABLES

1. Enrollment Status of the Population 3 Years Old and Over, by Age, Sex, Race, Hispanic Origin, and Selected Educational Characteristics: October 1996..... 1
2. Enrollment Status of the Population 3 Years Old and Over by Age, Metropolitan Status, Race, Hispanic Origin, and Selected Educational Characteristics: October 1996..... 4
3. Single Grade of Enrollment and High School Graduation Status for Persons 3 Years Old and Over, by Age (Single Years for 3 to 24 Years), Sex, Race, and Hispanic Origin: October 1996.... 8
4. Preprimary School Enrollment of Persons 3 to 6 Years Old, by Residence, Mother's Labor Force Status and Education, Family Income, Race, and Hispanic Origin: October 1996..... 15
5. Level of Enrollment Below College for Persons 3 to 24 Years Old, by Control of School, Metropolitan status, Sex, Race, and Hispanic Origin: October 1996..... 21
6. Enrollment Status of Primary Family Members 3 to 17 Years Old, by Family Income, Level of Enrollment, Control of School, Sex, Race, and Hispanic Origin: October 1996..... 23
7. Enrollment Status of Primary Family Members 3 to 17 Years Old, by Educational Attainment of Family Householder, Level of Enrollment, Control of School, Sex, Race, and Hispanic Origin: October 1996..... 26
8. Persons 15 to 24 Years Old Enrolled in Secondary School in Previous Year by Current Enrollment Status, Age, Sex, Race, Hispanic Origin and Family Income (for Dependent Family Members): October 1996..... 29
9. College Enrollment of the Population 15 Years Old and Over, by Attendance Status, Type of

School, Age, Sex, Race, and Hispanic Origin: October 1996..... 33
10. Attendance Status of College Students 15 Years Old and Over, by Sex, Age, Year and Type of College, Race, and Hispanic Origin: October 1996..... 39
11. Employment Status of High School and College Students 15 Years Old and Over, by Level of School, Type of College, Attendance Status, Age, Sex, Race, and Hispanic Origin: October 1996..... 41
12. Population 15 Years Old and Over Enrolled in Vocational Courses, by Employment Status, Age, Sex, Race, and Hispanic Origin: October 1996..... 47
13. Level of Enrollment of the Population 15 Years Old and Over, by Type of School, Attendance Status, Age, Sex, Marital Status, Race, and Hispanic Origin: October 1996..... 51
14. Enrollment and Employment Status of Recent High School Graduates 16 to 24 Years Old, by Type of School, Year of School, Attainment Level for Persons Not Enrolled, Sex, Race, and Hispanic Origin: October 1996..... 57
15. Enrollment Status of Primary Family Members 18 to 24 Years Old, by Family Income, Level of Enrollment, Type and Control of School, Attendance Status, Sex, Family Status, Race, and Hispanic Origin: October 1996..... 61
16. Families by Full-Time College Enrollment of Dependent Members 18 to 24 Years Old, by Family Income, Race, and Hispanic Origin: October 1996..... 69
17. Enrollment Status of Dependent Family Members 18 to 24 Years Old, by Educational Attainment of Family Householder, Level of Enrollment, Attendance Status, Sex, Race, and Hispanic Origin: October 1996..... 70
18. College Enrollment This Year, by Enrollment Status Last Year, Attendance Status, Years of School Completed, Age, Sex, Race, and Hispanic Origin for High School Graduates: October 1996..... 73
19. Families With Children 5 to 17 Years Old by

Enrollment Status in Kindergarten to High School, by Control of School, Family Income, Metropolitan Status, Region, Type of Family, Race, and Hispanic Origin: October 1996..... 79

APPENDIXES

A. Historical Tables

A-1. School Enrollment of Persons 3 to 34 Years Old, by Level and Control of School, Race, and Hispanic Origin: October 1955 to 1996..... A-1
A-2. Percentage of Persons 3 to 34 Years old Enrolled in School, by Age, Gender, Race, and Hispanic Origin: October 1947 to 1996..... A-4
A-3. Persons 6 to 17 Years Old Enrolled Below Modal Grade: October 1971 to 1996..... A-11
A-4. Annual High School Dropout Rates by Gender, Race, Grade, and Hispanic Origin: October 1967 to 1996..... A-16
A-5. Persons 14 to 24 Years Old by High School Graduate Status, College Enrollment, Attainment, Gender, Race, and Hispanic Origin: October 1967 to 1996..... A-20
A-6. Age Distribution of College Students 14 Years Old and Over, by Gender: October 1947 to 1996... A-26

A-7. College Enrollment of Students 14 to 34 Years Old, by Type of College, Attendance Status, Age, and Gender: October 1970 to 1996. ..... A-29

B. Definitions and Explanations..... B-1
C. Source and Accuracy of the Estimates..... C-1

Table 1. Enrollment Status of the Population 3 Years Old and Over, by Age, Sex, Race, Hispanic Origin, and Selected Educational Characteristics: October 1996

r = Revised, controlled to 1990 census based population estimates; previous 1993 data controlled to 1980 census based population estimates.
Data shown for 1947 to 1966 for the Black population are for Black and other races.
Hispanics may be of any race.

Note: Data for 1947 to 1953 exclude kindergarten. Nursery school was first collected in 1964.

r = Revised, controlled to 1990 census based population estimates; previous 1993 data controlled to 1980 census based population estimates.
Note: The change in the educational attainment question and the college completion categories from "4 or more years of college, to "at least some college," in 1992 caused an increase in the proportion of 14-to-24-year-old high school graduates enrolled in college or completed some college, of approximately 5 percentage points.
High school graduates are people who have completed 4 years of high school or more, for 1967 to 1991. Beginning in 1992, they were people whose highest degree was a high school diploma (including equivalency) or higher.
Hispanics may be of any race.

Appendix B.
Definitions and Explanations

Population coverage. The figures in this report for October 1996 are sample survey data and related to the civilian noninstitutional population of the 50 States and the District of Columbia. The estimation procedure used for this survey involves the inflation of the weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, sex, race, and Hispanic origin. These independent estimates are based on civilian noninstitutional population counts from the decennial censuses and are updated with statistics on births, deaths, immigration, and emigration and statistics on the strength of the Armed Forces. Data published for 1972 through 1980 were based on independent population estimates derived by updating the 1970 decennial census counts. Data published for 1981 to 1993 were based on independent population estimates derived by updating the 1980 decennial census counts. Starting with the data collected in the October 1994 Current Population Survey (CPS), independent estimates were based on civilian noninstitutional population controls for age, race, and sex established by the 1990 decennial census and adjusted for undercount of about 1.6 percent.

School enrollment. The school enrollment statistics from the current survey are based on replies to the interviewer's inquiry whether the person was enrolled in regular school. Interviewers were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year in any type of public, parochial, or other private school in the regular school system. Such schools include nursery schools, kindergartens, elementary schools, high schools, colleges, universities, and professional schools. Attendance may be on either a full-time, or part-time basis and during the day or night. Regular schooling is that which may advance a person toward an elementary or high school diploma, a college, university, or professional school degree. Children enrolled in nursery schools and kindergarten are included in the enrollment figures for regular schools and are also shown separately.

Enrollment in schools which are not in the regular school system, such as trade schools, business colleges, and schools for the mentally handicapped, which do not advance students to regular school degrees, is not included.

Persons enrolled in classes which do not require physical presence in school, such as correspondence courses or other courses of independent study, and in training courses given directly on the job, are also excluded from the count of those enrolled in school, unless such courses are being counted for credit at a regular school.

Level of school. The statistics on level of school indicate the number of persons enrolled at each of five levels—nursery school, kindergarten, elementary school (1st to 8th grades), high school (9th to 12th grades), and college or professional school. The last group includes graduate students in colleges or universities. Persons enrolled in elementary, middle school, intermediate school or junior high school through the eighth grade are classified as in elementary school. All persons enrolled in 9th through 12th grade are classified as in high school.

Nursery school. A nursery school is defined as a group or class that is organized to provide educational experiences for children during the year or years preceding kindergarten. It includes instruction as an important and integral phase of its program of child care. Private homes in which essentially custodial care is provided are not considered nursery schools. Children attending nursery school are classified as attending during either part of the day or the full day. Part-day attendance refers to those who attend either in the morning or in the afternoon, but not both. Full-day attendance refers to those who attend in both the morning and the afternoon.

Head Start. Children enrolled in Head Start programs or similar programs sponsored by local agencies to provide preschool education to young children are counted under nursery school.

Public or private school. In this report, a public school is defined as any educational institution operated by publicly elected or appointed school officials and supported by public funds. Private schools include educational institutions established and operated by religious bodies, as well as those which are under other private control. In cases where enrollment was in a school or college which was both publicly and privately controlled or supported, enrollment was counted according to whether it was primarily public or private.

Modal grade. Enrolled persons are classified according to their relative progress in school: that is, whether the

grade or year in which they were enrolled was below, at, or above the modal (or typical) grade for persons of their age at the time of the survey. The modal grade is the year of school in which the largest proportion of students of a given age is enrolled.

Annual High School Dropout Rate. The annual high school dropout rate is an estimate of the proportion of students who drop out of school in a single year. Table A-4 presents estimates of the annual dropout rate for various groups since 1967. This section briefly explains

Basic School Enrollment Supplement

(Questions included in the October CPS since 1967)
* = added since 1987 (year)

1. Is ... attending or enrolled in regular school? (Regular school includes elementary school, high school and schooling that leads to a college or professional school degree)
   <1> Yes
   <2> No (Go to 6)

2. Is ... enrolled in public or private school?
   <1> Public
   <2> Private

3. What grade or year is ... attending?

   <1-12> Grades 1 through 12 - elementary through high school (Skip to 7)
   <21> 1st year of college (freshman)
   <22> 2nd year of college (sophomore)
   <23> 3rd year of college (junior)
   <24> 4th year of college (senior)
   <25> 1st year of graduate school
   <26> 2nd year or higher of graduate school
   <30> College, no year reported

4. Is ... attending college full-time or part-time?
   <1> Full-time
   <2> Part-time

5. Is this a 2-year or a 4-year college or university?
   <1> 2-year college (community or junior college)
   <2> 4-year college or university

*6. Excluding (regular college courses and) on the job training, is ... taking any business, vocational, technical, secretarial, trade, or correspondence courses? (1987)
   <1> Yes
   <2> No

7. Was ... attending or enrolled in a regular school or college in October 1993, that is, October of last year?
   <1> Yes
   <2> No (Skip to 9)

*8. What grade or year was ... attending last year? (1989)

   <1-12> Grades 1 through 12 elementary through high school
   <21> 1st year of college (freshman)
   <22> 2nd year of college (sophomore)
   <23> 3rd year of college (junior)
   <24> 4th year of college (senior)
   <25> 1st year of graduate school
   <26> 2nd year or higher of graduate school
   <30> College, no year reported

9. INTERNAL CHECK ITEM A
   ENROLLED GRADE = 1-12 (End questions)
   All others
   AGE = 15-29 (15-24 through 1992)
   College graduate (Skip to 11)
   High school graduate (Skip to 12)
   Not High school graduate (Ask 10)
   AGE = 30+ (End questions)

10. In what calendar year did ... last attend regular school?
   <1> 1994
   <2> 1993 or before
   <3> Never attended
   --(Skip to 13)--

*11. In what calendar year did ... receive his/her most recent degree? (1993)
   <1> 1994
   <2> 1993 or before

12. In what calendar year did ... complete high school?
   <1> 1994
   <2> 1993 or before

*13. Did ... complete high school by means of an equivalency test, such as the GED? (1988)
   <1> Yes
   <2> No

School Enrollment Supplement-Children's Items

1. Age = 0-2 (Go to next child)
   3-5 (Ask 2) (Ask 3 through 1993)
   6-14 (Skip to 3)

*2. Is ... attending or enrolled in nursery school, kindergarten or elementary school? (1994)
   <1> Yes (Skip to 4)
   <2> No (End questions)

3. Is ...attending or enrolled in regular school?
   (Regular school includes nursery school, kindergarten, elementary school and schooling which leads to a high school diploma or college degree.)
   <1> Yes (Ask 4)
   <2> No (End questions)

4. Is ... enrolled in public or private school?
   <1> Public
   <2> Private

5. What grade or year is ... attending?
   (If nursery school or kindergarten, ask if full-day or part-day)

   <A> Nursery (preschool, pre-kindergarten) full-day
   <B> Nursery (preschool, pre-kindergarten) part-day
   <C> Kindergarten full-day
   <D> Kindergarten part-day
   <1-8> Grades 1 through 8 - Elementary
   <9-12> Grades 9 through 12 - High school

how the annual dropout rate is calculated; for further explanation and details of its derivation see CPR Series P-20, No. 413, School Enrollment—Social and Economic Characteristics of Students: October 1983.

Annual dropout rates for a single grade(x) are estimated as the ratio of the number of persons who were enrolled in grade(x) in the year preceding the survey, did not complete grade(x) and are not currently enrolled, to the number enrolled in grade(x) at the start of the year preceding this survey. Persons reported as enrolled last year but not currently enrolled are presented in table 8 by the highest grade completed and are presumed to have dropped out of the succeeding grade (except those who graduated this year). Thus, individuals counted as 10th grade dropouts are those not enrolled in school whose highest grade completed is the 9th grade. (They include not only those persons who were enrolled in the 10th grade in the fall of the year preceding the survey and left school without completing the year, but also those persons who finished the 9th grade in the spring preceding the survey and were not enrolled at the survey date.) These estimates form the numerator of estimates of the annual grade specific dropout rate.

Persons currently enrolled in high school are presumed to have successfully completed and been enrolled in the preceding grade in the preceding year. Thus, those who have successfully completed the 10th grade are enrolled in the 11th grade. Along with the persons who dropped out of that grade, they comprise the denominator of the estimate of the annual grade-specific dropout rate.

$$\text{Dropout from grade } n = \frac{\text{Not enrolled and highest grade completed} = n-1}{\text{Enrolled in grade } n+1 + \text{Not enrolled and highest grade completed} = n-1}$$

Since persons who complete the 12th grade cannot be presumed to enroll in college, the estimate of the number of persons enrolled in the 12th grade one year prior to the survey is constructed as the sum of the number of persons reported as having graduated from high school "this year" in table 8 (both those enrolled in the first year of college and persons not currently enrolled whose highest grade completed is the 12th grade) and those persons not currently enrolled who were enrolled last year and whose highest grade completed is the 11th grade (dropouts).

The annual dropout rate for all grades during one year can be obtained by summing the components of the rates for the individual grades. In other words, those persons who were enrolled in the tenth, eleventh, or twelfth grade last year and who are not currently enrolled and do not have a diploma. The following chart shows the components of the annual dropout rate calculation for each grade.

Dropped out of grade	Numerator	Denominator	
	Not currently enrolled and highest grade =	Current grade in which enrolled =	Not currently enrolled and highest grade =
10	9	11	9
11	10	12	10
12	11	College 1 + (not enrolled, completed 12 and graduated this year)	11

In addition to the annual rate, two other estimates of dropouts are frequently used. The annual dropout rate is different from a "pool" (or status) measure such as the proportion of an age group who are high school dropouts (not enrolled in school, not high school graduates, shown in table 1), which does not depend on when the individuals dropped out.

A third measure of dropouts is the cohort measure, most commonly from a longitudinal study, in which one calculates the proportion of a specific group of people enrolled in a specific year, who had not received diplomas (and who were no longer in school) some years later. For example, the proportion of a cohort enrolled in ninth grade in year X, who were not enrolled and had not received a diploma by year X+4.

College enrollment. The college enrollment statistics are based on replies to the interviewer's inquiry as to whether the person was attending or enrolled in college. Interviewers were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year, except those who have left for the remainder of the term. Thus, regular college enrollment includes those persons attending a 4-year or 2-year college, university, or professional school (such as medical or law school) in courses that may advance the student toward a recognized college or university degree (e.g., BA or MA). Attendance may be either full time or part time, during the day or night. The college student need not be working toward a degree, but he/she must be enrolled in a class for which credit would be applied toward a degree. (see "school enrollment")

Two-year and four-year colleges. College students were asked to report whether the college in which they were enrolled was a 2-year college (junior or community college) or a 4-year college or university. Students enrolled in the first 4 years were classified by the type of college they reported. Type of college is shown in tables for undergraduates only. Graduate students are shown as a separate group.

Revisions in processing and tabulations have resulted in data not strictly comparable to that published for earlier years. In tabulations for years prior to 1987, students in the fourth academic year of college were

assumed to be in a 4-year college or university regardless of the type of college they reported (74,000 fourth-year students were reported enrolled in 2-year colleges in 1986 on the questionnaire but included in 4-year colleges in the tabulations). Also before 1987, type of college was not allocated for students who did not report (about 250,000 students in the first to third year in 1986). Revised edit and allocation procedures for 1987 and 1988 increased the estimated number of college students, which also increased the numbers of persons reported in 2-year and 4-year colleges. The following table shows data for 1986 using both the revised and old processing and tabulation systems. The differences are due to procedural changes rather than real change:

Undergraduates (X 1000)	Revised	Old	Difference
14 to 34 years old	9,098	8,972	126
2-year college	3,087	2,831	256
4-year college	6,011	5,892	119
Type not reported	000	249	-249

Full-time and part-time attendance. College students were classified, in this report, according to whether they were attending school on a full-time or part-time basis. A student was regarded as attending college full time if he/she was taking 12 or more hours of classes during the average school week, and part time if he/she was taking less than 12 hours of classes during the average school week.

School enrollment in year preceding current survey. An inquiry on enrollment in regular school or college in October of the preceding year was asked for all persons (enrolled and not enrolled). In years before 1988, the question was asked only of persons who were not currently attending regular school or were enrolled in college. In the tabulations of persons enrolled in secondary school in the previous year, persons currently enrolled in high school are assumed to have been enrolled the previous year.

Vocational school enrollment. Vocational school enrollment includes enrollment in business, vocational, technical, secretarial, trade, or correspondence courses which are not counted as regular school enrollment and are not for recreation or adult education classes. Courses counted as college enrollment should not also be included as vocational.

Comparability of enrollment data in previous years. Changes in the edit and tabulation packages used in processing the October CPS school enrollment supplement have caused some minor revisions in the estimates. The current edit and tabulation package began with 1987 data. The 1986 data which were published in CPR series P-20 No. 429, were reprocessed with the rewritten programs in order to clarify comparability. Tables A-1 to A-7 contain enrollment data in time series. In earlier editions of this report, in each table, there were two presentations for 1986. In this publication only the revised 1986 data are shown in tables A-1 to A-7.

Major changes in the data due to the 1987 edit revisions are:

a. Among 14- and 15-year-olds, an edit improvement allowed persons with enrollment data not reported who were previously automatically imputed "not enrolled" to be enrolled.

b. Revisions in tabulation of enrollment in the previous year simplifies calculation of an annual high school dropout rate.

c. Edit improvements caused increases in college enrollment estimates, most notably above age 24; this age group was largely ignored in earlier edits.

d. Type of college is fully allocated (discussed earlier).

e. Tabulations of type of college are available by race.

f. Dependent family member is defined consistently.

g. New data on employment status, vocational course enrollment, college retention and re-entry, and families with children enrolled in public and private school are available.

In the series of reports on school enrollment for 1987 to 1992, race and Hispanic origin were erroneously tabulated for a small percentage of children 3 to 14 years old. Race and Hispanic origin of an adult in the household were attributed to the child, rather than using the child's reported characteristics. In the vast majority of cases these characteristics were the same for family members, but for a small percentage of children, they were different. The correction made the following proportional changes in the numbers of children in each group: White (-0.5 percent), Black (+3.1 percent), Hispanic origin (-4.6 percent).

Tables A-1 to A-7 show two sets of data for 1993. The data labeled 1993^r were processed using population controls based on the 1990 census, adjusted for undercount. Compared with the data labeled 1993, which used population controls based on the 1980 census, it shows the affect of the change in population controls.

The change in 1994 from a paper and pencil survey to a computer assisted survey had some affect on the data. Most notably the enrollment question for children 3 to 5 years old was different from the question for older children—it included a reference to nursery school. In 1994 reported nursery school enrollment was significantly higher than in earlier years.

Age. The age classification is based on the age of the person at his/her last birthday.

Race. The population is divided into three groups on the basis of race—White, Black, and other races. The last category includes American Indians, Japanese, Chinese, other Asian and Pacific Islanders, and any other race except White and Black. In this report, other races is not shown separately.

Hispanic origin. Information on origin or descent was obtained by asking, "What is (this person's) origin or descent?" Responses generally refer to a person's perceived national or ethnic lineage and do not necessarily indicate the country of his/her birth or that of his/her parents.

Persons of Hispanic origin are persons who reported themselves as Mexican American, Chicano, Mexican, Mexicano, Puerto Rican, Cuban, Central or South American, or other Hispanic origin. However, all persons who reported themselves as Mexican American, Chicano, Mexican, or Mexicano were combined into the one category—Mexican. Persons of Hispanic origin may be of any race.

Marital status. The marital status category shown in this report, "married, spouse present," includes persons who are currently married and living with their spouse. The category "never married" is self-explanatory. The category "other marital status" includes persons who are separated, divorced, or widowed.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Family. A family (also referred to in this publication as a primary family) is a group of two persons or more (one of whom is the householder), related by birth, marriage, or adoption and residing together; all such persons are considered members of one family.

Householder. The householder refers to the person (or one of the persons) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the "reference person" to whom the relationship of all other household members, if any, is recorded.

Prior to 1980, the husband was always considered the householder in married-couple households. The number of householders is equal to the number of households. Also, the number of family householders is equal to the number of families.

Family householder. The family member who is also the householder (the person or one of the persons who maintain the household), or reference person, is the family householder.

Head versus householder. Beginning with the 1980 census, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" were used. Recent social changes resulted in greater sharing of household responsibilities among the adult members and, therefore, made the term "head" inappropriate in the analysis of household and family data. Specifically, the Bureau reconsidered its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together.

In this report, the term "householder" is used in the presentation of data that had previously been presented with the designation "head." The householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of other household members is to be recorded.

The practice of using the term "head of family" or "family head", to refer to the person maintaining the household, was discontinued in CPS surveys conducted after the 1980 Census of Population. In surveys taken prior to the 1980 Census of Population, husbands in husband-wife families were always classified as "family heads." Women were only "family heads" if no spouse was present. The person who maintains the household is now called the "family householder."

Dependent family member. In theory, a dependent family member is one who is financially dependent on the householder. In these data a dependent family member is a primary family member, under 25 years old, who is an own child, brother/sister, or other relative (not parent) of the householder, and is not "married, spouse present."

In analyses of data on college enrollment by family income for earlier years, persons who were primary family members, 18 to 24 years old, and not "married, spouse present" were often treated as dependent family members, although not labelled as such and including some householders (e.g. "other marital status" in table 13 of CPR Series P-20, No. 429.) The family income

reported for dependent family members is presumed to be that of the parental family; for others, it is presumed to be that of the individual and his/her spouse. In table 15, persons labeled "dependent family member" and "other marital and family status" combined are equivalent to persons labeled "other marital status" in table 13 of CPR Series P-20, No. 429. Persons who are "other marital and family status" in this report are the family householders who are not "married, spouse present."

Educational Attainment. Data on educational attainment are derived from a single question that asks, "What is the highest level of school ... has completed, or the highest degree ... has received?" Levels of completion beyond a high school degree are identified with specific categories, such as associate, bachelors and masters, for example.The question on educational attainment applies only to progress in "regular" schools. Such schools include public, private and parochial elementary and high schools (both junior and senior), colleges, universities and professional schools (whether day or night schools). Thus, regular schooling is that which may advance a person toward an elementary school certificate, a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools is counted only if the credits obtained are regarded as transferable to schools in the regular school system.

The single educational attainment question now in use was introduced in the CPS beginning January 1992, and is similar to that used in the 1990 Decennial Census of Population and Housing. Consequently, data on educational attainment from the 1994 CPS are not directly comparable to CPS data from years prior to 1992. The new question replaces the previous two-part question used in the CPS that asked respondents to report the highest grade they had attended, and whether or not they had completed that grade.

Labor force status.

In the labor force. The definition of labor force and employment status relates to the population 15 years old and over. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. Data tabulated from the October CPS are for the civilian population only.

Not in the labor force. All civilians who are not classified as employed or unemployed are defined as "not in the labor force."

Employed. Employed persons comprise (1) all civilians who, during the survey week containing October 12, did any work at all as paid employees or in their own business or profession, on their own farm, or in a business operated by a member of the family and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework and painting or repairing own home) or volunteer work for religious, charitable, and similar organizations

Unemployed. Unemployed persons are those civilians who, during the survey week had no employment but were available for work and (1) had engaged in any specific job seeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off, or (3) were waiting to report to a new wage or salary job within 30 days.

Full-time and part-time employment. Persons who worked 35 hours or more during the survey week and those who worked 1 to 34 hours but usually work full time are classified as employed full time. Part-time workers are persons who worked 1 to 34 hours during the survey week and usually work only 1 to 34 hours. Persons with a job but not at work during the survey week are classified according to whether they usually work full time or part time.

Family income. In this report, family income is derived from a single question asked of the household respondent when a household first enters the sample and is updated on the 1-year anniversary of entry. Income includes money income from jobs; net income from business, farm, or rent; pensions; dividends; interest; social security payments; and any other money income. The income of nonrelatives living in the household is excluded, but the income of all family members 14 years old and over, including those temporarily living away, is included. It should be noted that while characteristics of the person, such as age and marital status, and the composition of families refer to the date of the interview, family income statistics refer to receipts over a 12-month period starting 12 to 16 months prior to the interview.

The income tables include in the lowest income group those who were classified as having no income in the 12-month reference period and those reporting a loss in net income from farm and nonfarm self-employment or in rental income.

The detailed income tables include a separate category ("not reported") for families for which no income information was obtained. In most other CPS's showing income data, the missing income data have been allocated.

The money income level of families shown in this report may be somewhat understated. Income data from the October control card are based on the respondent's estimate of total family money income in broad, fixed income intervals. Income data collected in the March supplement to the CPS are based on responses to 11 direct questions asked about each person 15 years old and over and identifying 23 different sources of income in the preceding calendar year. Previous research has shown that the use of broad income intervals to record money income tends to reduce the rate of nonresponse, while increasing the likelihood that the amounts reported will be significantly understated as compared with results from more detailed questions.

Metropolitan-nonmetropolitan residence. The population residing in metropolitan statistical areas (MSA's) constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term, SMSA, was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's).

Central cities. The largest city in each MSA is always designated a central city. There may be additional central cities if specified requirements, designed to identify places of central character within the MSA, are met. Although the largest central cities are generally included in the title of the MSA, there may be central cities that are not part of the title. The balance of the MSA outside the central city or cities often is regarded as equivalent to "suburbs."

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 30, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan areas as defined on the basis of the 1970 census. Since there are important differences in the population classified as metropolitan using the 1970 and 1984 definitions, comparisons should be avoided.

Comparability of metropolitan estimates. A redesigned CPS sample based on the 1990 census began phase-in in April 1994 and was completed in July 1995. During the phase-in, when part of the sample was based on the 1980 census and part was based on the 1990 census, estimates by metropolitan status had limited reliability. Estimates for 1994 by metropolitan status should be used cautiously or not at all. Although estimates in this report were based on population controls derived from the 1990 census, metropolitan definitions were based on the 1980 census, since phase-in of the new sample was in the early stages.

The recent CPS metropolitan estimates (since 1986) have consistently been higher than independent estimates of the metropolitan population prepared by the Census Bureau; the CPS nonmetropolitan estimates have been lower than the independent estimates. The apparent overestimation of metropolitan and underestimation of nonmetropolitan population in the CPS relative to the Bureau's independent estimates should be taken into account when using the data.

Geographic regions. The four major regions of the United States, for which data are presented, represent groups of States, as follows:

Northeast— Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Midwest[1]*—Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.*

South— Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West— Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

Symbols. The following symbols are used throughout the tables:

-	Represents zero or rounds to zero.
B	The base of the derived figure is less than 75,000.
X	Not applicable
NA	Not available.

Rounding of estimates. Individual figures are rounded to the nearest thousand without being adjusted to group totals which are independently rounded. With few exceptions, percentages are based on the rounded absolute numbers.

[1]Formerly North Central.

Appendix C.
Source and Accuracy of Estimates

SOURCE OF DATA

The data in this microdata file come from the October 1996 Current Population Survey (CPS). The Bureau of the Census conducts the survey every month, although this file has only October data. The October survey uses two sets of questions, the basic CPS and the supplement.

Basic CPS. The basic CPS collects primarily labor force data about the civilian noninstitutional population. Interviewers ask questions concerning labor force participation about each member 15 years old and over in every sample household.

Sample design. The present CPS sample was selected from the 1990 Decennial Census files with coverage in all 50 states and the District of Columbia. The sample is continually updated to account for new residential construction. The United States was divided into 2,007 geographic areas. In most states, a geographic area consisted of a county or several contiguous counties. In some areas of New England and Hawaii, minor civil divisions are used instead of counties. A total of 754 geographic areas were selected for sample. About 50,000 occupied households are eligible for interview every month. Interviewers are unable to obtain interviews at about 3,200 of these units. This occurs when the occupants are not found at home after repeated calls or are unavailable for some other reason.

Since the introduction of the CPS, the Bureau of the Census has redesigned the CPS sample several times. These redesigns have improved the quality and accuracy of the data and have satisfied changing data needs. The most recent changes were completely implemented in July 1995.

October Supplement. In addition to the basic CPS questions, interviewers asked supplementary questions in October about school enrollment for all household members 3 years old and over.

Estimation procedure. This survey's estimation procedure adjusts weighted sample results to agree with independent estimates of the civilian noninstitutional population of the United States by age, sex, race, Hispanic/non-Hispanic origin, and state of residence. The adjusted estimate is called the post-stratification ratio estimate. The independent estimates are calculated based on information from four primary sources:

- The 1990 Decennial Census of Population and Housing.
- An adjustment for undercoverage in the 1990 census.
- Statistics on births, deaths, immigration, and emigration.
- Statistics on the size of the Armed Forces.

The independent population estimates include some, but not all, undocumented immigrants.

ACCURACY OF THE ESTIMATES

Since the CPS estimates come from a sample, they may differ from figures from a complete census using the same questionnaires, instructions, and enumerators. A sample survey estimate has two possible types of errors: sampling and nonsampling. The accuracy of an estimate depends on both types of errors, but the full extent of the nonsampling error is unknown. Consequently, one should be particularly careful when interpreting results based on a relatively small number of cases or on small differences between estimates. The standard errors for CPS estimates primarily indicate the magnitude of sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure systematic biases in the data. (Bias is the average over all possible samples of the differences between the sample estimates and the desired value.)

Nonsampling Variability. There are several sources of nonsampling errors including the following:

- Inability to obtain information about all cases in the sample.
- Definitional difficulties.
- Differences in the interpretation of questions.
- Respondents' inability or unwillingness to provide correct information.
- Respondents' inability to recall information.
- Errors made in data collection such as in recording or coding the data.
- Errors made in processing the data.
- Errors made in estimating values for missing data.
- Failure to represent all units with the sample (undercoverage).

CPS undercoverage results from missed housing units and missed persons within sample households. Overall CPS undercoverage is estimated to be about 8 percent. CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. As described previously, ratio estimation to independent age-sex-race-Hispanic population controls partially corrects for the bias due to undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race-origin-state group.

A common measure of survey coverage is the coverage ratio, the estimated population before post-stratification divided by the independent population control. Table A shows CPS coverage ratios for age-sex-race groups for a typical month. The CPS coverage ratios can exhibit some variability from month to month. Other Census Bureau household surveys experience similar coverage.

Table 1. CPS Coverage Ratios

	Non-Black		Black		All Persons		
Age	M	F	M	F	M	F	Total
0-14	0.929	0.964	0.850	0.838	0.916	0.943	0.929
15	0.933	0.895	0.763	0.824	0.905	0.883	0.895
16-19	0.881	0.891	0.711	0.802	0.855	0.877	0.866
20-29	0.847	0.897	0.660	0.811	0.823	0.884	0.854
30-39	0.904	0.931	0.680	0.845	0.877	0.920	0.899
40-49	0.928	0.966	0.816	0.911	0.917	0.959	0.938
50-59	0.953	0.974	0.896	0.927	0.948	0.969	0.959
60-64	0.961	0.941	0.954	0.953	0.960	0.942	0.950
65-69	0.919	0.972	0.982	0.984	0.924	0.973	0.951
70+	0.993	1.004	0.996	0.979	0.993	1.002	0.998
15+	0.914	0.945	0.767	0.874	0.898	0.927	0.918
0+	0.918	0.949	0.793	0.864	0.902	0.931	0.921

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, **An Error Profile: Employment as Measured by the Current Population Survey**, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978 and Technical Paper 40, **The Current Population Survey: Design and Methodology**, Bureau of the Census, U.S. Department of Commerce.

Comparability of data. Data obtained from the CPS and other sources are not entirely comparable. This results from differences in interviewer training and experience and in differing survey processes. This is an example of nonsampling variability not reflected in the standard errors. Use caution when comparing results from different sources.

A number of changes were made in data collection and estimation procedures beginning with the January 1994 CPS. The major change was the use of a new questionnaire. The questionnaire was redesigned to measure the official labor force concepts more precisely, to expand the amount of data available, to implement several definitional changes, and to adapt to a computer-assisted interviewing environment. The March supplemental income questions were also modified for adaptation to computer-assisted interviewing, although there were no changes in definitions and concepts. Due to these and other changes, one should use caution when comparing estimates from data collected in 1994 and later years with estimates from earlier years.

Caution should also be used when comparing data from this microdata file, which reflects 1990 census-based population controls, with microdata files from March 1993 and earlier years, which reflect 1980 census-based population controls. This change in population controls had relatively little impact on summary measures such as means, medians, and percentage distributions. It did have a significant impact on levels. For example, use of 1990 based population controls results in about a 1-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for data collected in 1994 and later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Since no independent population control totals for persons of Hispanic origin were used before 1985, compare Hispanic estimates over time cautiously.

Based on the results of each decennial census, the Bureau of the Census gradually introduces a new sample design for the CPS. During this phase-in period, CPS data are collected from sample designs based on different censuses. While most CPS estimates have been unaffected by this mixed sample, geographic estimates are subject to greater error and variability. Users should exercise caution when comparing estimates across years for metropolitan/nonmetropolitan categories.

Note When Using Small Estimates. Because of the large standard errors involved, summary measures (such as medians and percentage distributions) would probably not reveal useful information when computed on a smaller base than 75,000.

Take care in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Sampling Variability. Sampling variability is variation that occurred by chance because a sample was surveyed rather than the entire population. Standard errors, as calculated by methods described later in "**Standard Errors and Their Use**," are primarily measures of sampling variability, although they may include some nonsampling error.

Standard Errors and Their Use. A number of approximations are required to derive, at a moderate cost, standard errors applicable to all the estimates in this microdata file. Instead of providing an individual standard error for each estimate, parameters are provided to calculate standard errors for various types of characteristics. These parameters are listed in Tables 2-4. Table 5 shows factors to apply to prior year parameters.

The sample estimate and its standard error enable one to construct a confidence interval, a range that would include the average result of all possible samples with a known probability. For example, if all possible samples were surveyed under essentially the same general

conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples. However, one can say with specified confidence that the interval includes the average estimate calculated from all possible samples.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. One common type of hypothesis is that the population parameters are different. An example of this would be comparing the percentage of employed males 20 to 24 years old working part time to the percentage of employed females in the same age group who were part-time workers. An illustration of this is included in the following pages.

Tests may be performed at various levels of significance. A significance level is the probability of concluding that the characteristics are different when, in fact, they are the same. To conclude that two parameters are different at the 0.10 level of significance the absolute value of the estimated difference between characteristics must be greater than or equal to 1.645 times the standard error of the difference.

The Census Bureau uses 90-percent confidence intervals and 0.10 levels of significance to determine statistical validity. Consult standard statistical textbooks for alternative criteria.

Standard errors of estimated numbers. The approximate standard error, s_x, of an estimated number, **with the exception of school enrollment estimates**, from this microdata file can be obtained using this formula:

$$s_x = \sqrt{ax^2 + bx} \qquad (1)$$

Here x is the size of the estimate and a and b are the parameters in Table 2 associated with the particular type of characteristic. When calculating standard errors from cross-tabulations involving different characteristics, use the set of parameters for the characteristic which will give the largest standard error.

Illustration

Suppose there were 6,000,000 unemployed men in the civilian labor force. Use the appropriate parameters from Table 2 and formula (1) to get

Number, x	6,000,000
a parameter	-0.000016
b parameter	2,957
Standard error	131,000
90% conf. int.	5,785,000 to 6,215,000

The standard error is calculated as

$$s_x = \sqrt{-0.000018 \times 6{,}000{,}000^2 + 2{,}957 \times 6{,}000{,}000} = 131{,}000$$

The 90-percent confidence interval is calculated as $6{,}000{,}000 \pm 1.645 \times 131{,}000$.

A conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

Standard errors of estimated school enrollment numbers. The approximate standard error, s_x, of an estimated school enrollment number from this microdata file can be obtained using the formula

$$s_x = \sqrt{-\left(\frac{b}{T}\right)x^2 + bx} \qquad (2)$$

Here x is the size of the estimate, T is the total number of persons in a specific age group and b is the parameter in Table 3 associated with the particular type of characteristic. If T is not known, for Total or White use 100,000,000; for Blacks and Hispanic use 10,000,000. When calculating standard errors for numbers from cross-tabulations involving different characteristics, use the set of parameters for the characteristic which will give the largest standard error.

Illustration

Suppose there were 4,274,000 3 and 4 year olds enrolled in school and 6,711,000 children in that age group in October 1996. Use the appropriate b parameter from Table 3 and formula (2) to get

Number, x	4,274,000
Total, T	6,711,000
b parameter	3,184
Standard error	70,000
90% conf. int.	4,159,000 to 4,389,000

The standard is calculated as

$$s_x = \sqrt{-\frac{3,184}{6,711,000} \times 4,274,000^2 + 3,184 \times 4,274,000} = 70,000$$

The 90-percent confidence interval for this estimate is from 4,159,000 to 4,389,000, i.e., $4,274,000 \pm 1.645 \times 70,000$. Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on the size of the percentage and its base. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the parameter from Table 2 or 3 indicated by the numerator.

The approximate standard error, $s_{x,p}$, of an estimated percentage can be obtained by use of the formula

$$s_{x,p} = \sqrt{\frac{b}{x} p(100 - p)} \qquad (3)$$

Here x is the total number of persons, families, households, or unrelated individuals in the base of the percentage, p is the percentage ($0 \le p \le 100$), and b is the parameter in Table 2 or 3 associated with the characteristic in the numerator of the percentage.

Illustration

Suppose there were 15,016,000 persons aged 18 to 21, and that 44.9 percent were enrolled in college. Use the appropriate parameter from Table 3 and formula (3) to get

Percentage, p	44.9
Base, x	15,016,000
b parameter	2,766
Standard error	0.7
90% conf. int.	43.7 to 46.1

The standard error is calculated as

$$s_{x,p} = \sqrt{\frac{2{,}766}{15{,}016{,}000} \times 44.9 \times (100.0 - 44.9)} = 0.7$$

The 90-percent confidence interval for the estimated percentage of persons aged 18 to 21 in 1996 enrolled in college is from 43.7 to 46.1 percent, i.e., $44.9 \pm 1.645 \times 0.7$.

Standard Error of a Difference. The standard error of the difference between two sample estimates is approximately equal to

$$s_{x-y} = \sqrt{s_x^2 + s_y^2} \qquad (4)$$

where s_x and s_y are the standard errors of the estimates, x and y. The estimates can be numbers, percentages, ratios, etc. This will result in accurate estimates of the standard error of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration

Suppose that of 6,285,000 employed men between 20-24 years of age, 1,516,000 or 24.1 percent were part-time workers, and of the 5,824,000 employed women between 20-24 years

of age, 2,169,000 or 37.2 percent were part-time workers. Use the appropriate parameters from Table 2 and formulas (3) and (4) to get

	x	y	difference
Percentage, p	24.1	37.2	13.1
Number, x	6,285,000	5,824,000	-
b parameter	2,764	2,530	-
Standard error	0.9	1.0	1.3
90% conf. int.	22.6 to 25.6	35.6 to 38.8	11.0 to 15.2

The standard error of the difference is calculated as

$$s_{x-y} = \sqrt{0.9^2 + 1.0^2} = 1.3$$

The 90-percent confidence interval around the difference is calculated as $13.1 \pm 1.645 \times 1.3$. Since this interval does not include zero, we can conclude with 90 percent confidence that the percentage of part-time women workers between 20-24 years of age is greater than the percentage of part-time men workers between 20-24 years of age.

Table 2. 1996 Standard Error Parameters for School Enrollment October 1996

Characteristics	Total or White b	Black b	Hispanic b
Persons Enrolled in School:			
Total	2,766	3,761	7,021
Children 13 and under	3,184	3,221	3,642
Marital Status	6,332	11, 039	13,284
Household Characteristics:			
Head, Wife, or Primary Individual	2,068	1,871	3,467
Child or Other Relative in Primary Family, Secondary Family Member	6,332	11,039	13,868
Income, Earnings	2,241	2,447	5,206

Notes: The b parameters should be multiplied by 1.5 for nonmetropolitan residence categories.

The b parameters should be multiplied by the factors in Table 3 for regional data.

Table 3. Regional Factors to Apply to 1996 b Parameters

Type of Characteristic	factor
U. S. Totals:	1.00
Regions:	
Northeast	0.85
Midwest	1.03
South	1.08
West	1.09

Table 4 CPS Factors to Apply to a and b Parameters for School Enrollment Estimates Prior to 1996

Year	Total or White	Black	Hispanic
1994-1995	0.93	0.93	0.92
1990-1993	0.92	0.92	0.82
1988-1989	1.02	1.01	1.07
1985-1987	0.83	0.83	0.77
1982-1984	0.83	0.83	0.64
1977-1981	0.75	0.75	0.56
1967-1976	0.73	0.73	0.55
1957-1966	1.12	1.12	X
Before 1956	1.67	1.67	X
